Sustainable Energy, Reliable Power

[About Us](#) | [Solutions](#) | [Rentals](#) | [Finance](#) | [Footprint](#)

About Us

As a company birthed in the democratic era but shaped by pre-democratic era repressions, sustainable development of the economy is in our DNA. Our fair practices are geared towards cost efficiency and maximum value to our clients.

As a result of the diversity of experience and skills levels, our team embraces a culture of consultation, research and innovation which have over the years enabled us to provide best-practice and relevant solutions, as evidenced by our various projects in both public and private sectors.

Baus Power is registered with ECA(SA), CIDB, and NHBRC, adhering to industry standards and labour regulations. We hold a Level 1 BBBEE rating as a 100% black youth-owned company, ensuring socio-economic awareness in our operations.

Baus Power has had the privilege of collaborating with a diverse range of clients in the past, establishing a track record of successful partnerships across various industries. Some of our notable clients include:

Solutions

Baus Power has a team of experienced engineers and a workforce to execute any project. We have a network of professionals we engage to equal any task. We are positioned to facilitate power purchase agreements, private-public partnerships to successfully finance and deliver infrastructural developments.

We enshrine a collaborative and integrated approach that utilizes world class engineering principles. Research and development is a critical part of our business. We are constantly monitoring trends within the energy and engineering sector worldwide such that our solutions are adapted to international best practices and deliver maximum value to our clients.

We provide top-tier renewable energy services and electrification solutions tailored to meet diverse needs.

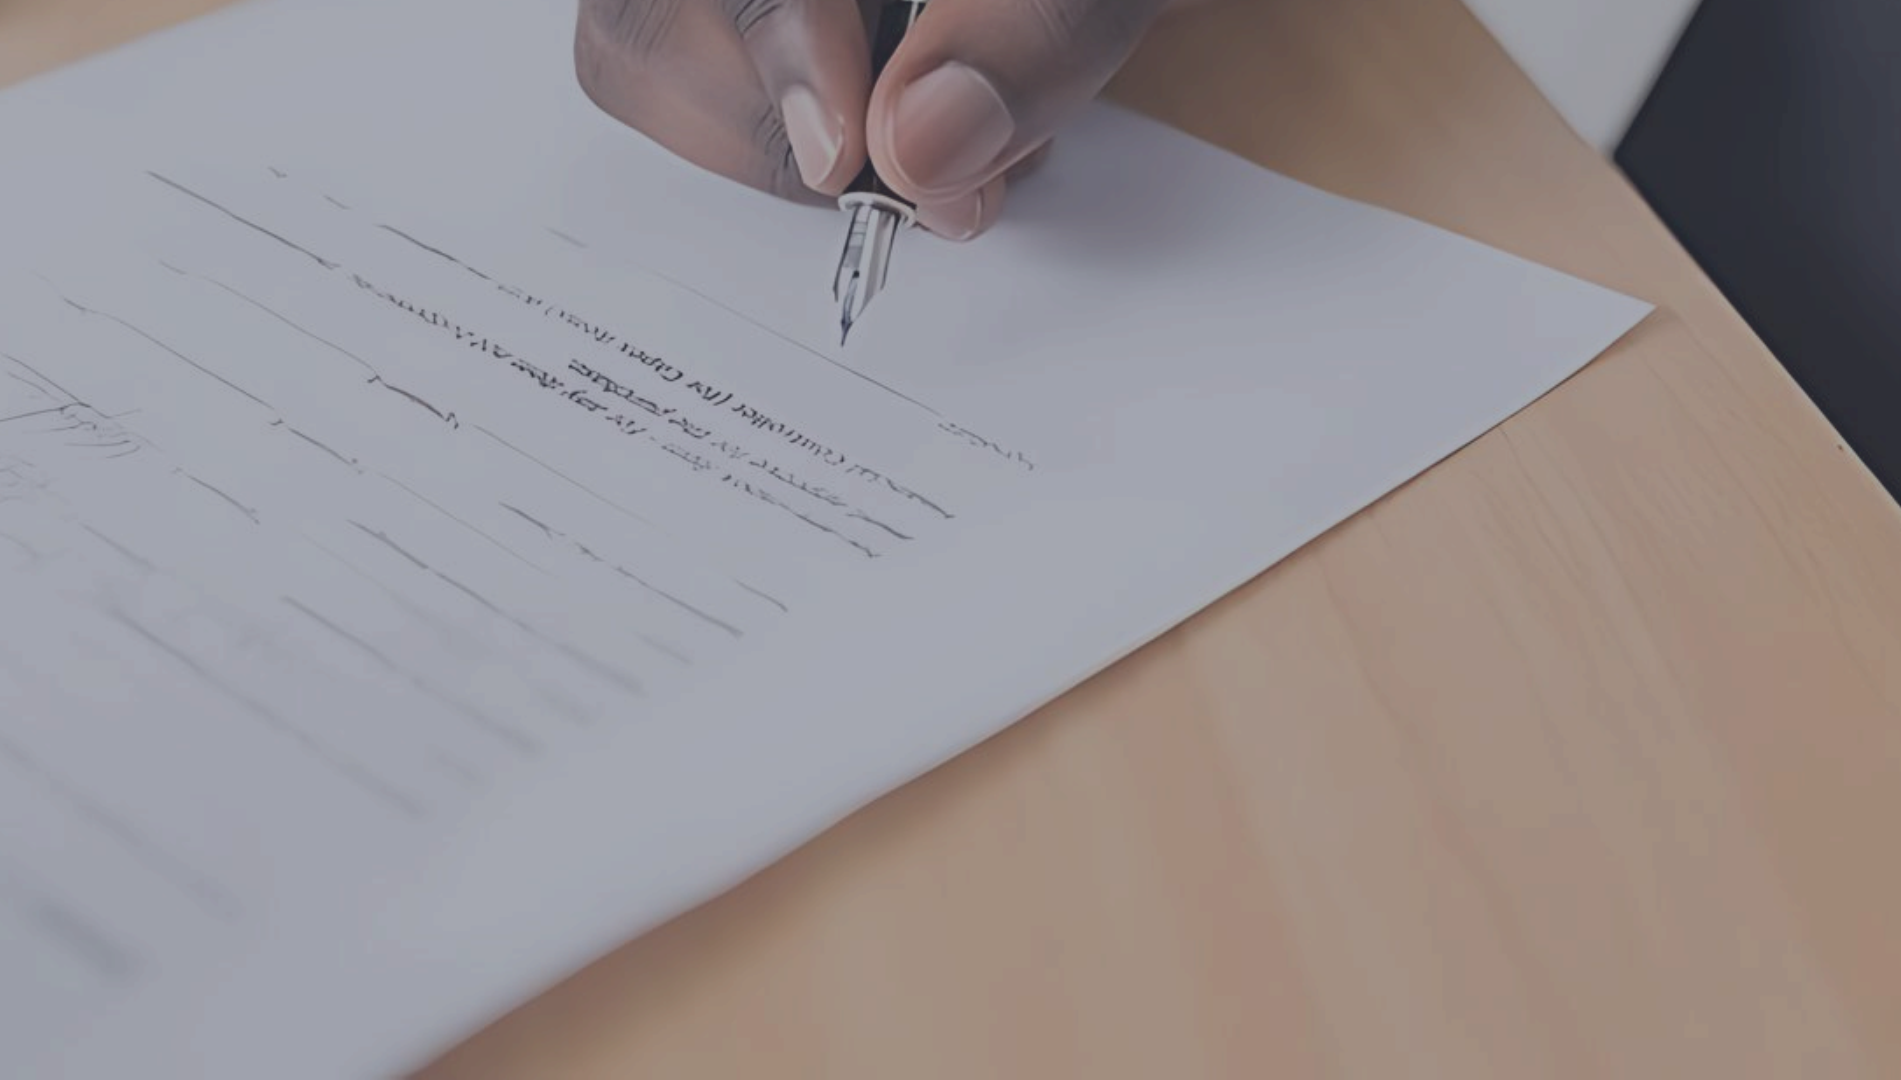

Rentals

At Baus Power, we specialize in offering innovative power backup solutions through rental options. We understand the importance of reliable energy sources, especially in the face of fluctuating power grids and environmental concerns. Our commitment lies in providing sustainable alternatives that meet the needs of both individuals and businesses.

With our rental services, customers can access cutting-edge renewable energy technologies without the upfront costs of ownership. Whether it's **solar, generators, wind turbines, or battery storage systems**, we tailor our solutions to fit diverse requirements and ensure uninterrupted power supply.

By choosing us, clients not only gain access to efficient and eco-friendly energy solutions but also contribute to a greener, more sustainable future.

Finance

Baus Power undertakes the installation, ownership, and operation of solar PV facilities, delivering solar energy to corporate clients. Businesses can adopt solar Power Purchase Agreements (PPAs) to finance and maintain their solar energy systems without any upfront investment, immediately benefiting from cost savings.

Payments under a PPA are based solely on the energy generated by the system during daylight hours. The specifics of power purchase are delineated in the PPA or solar lease, which is negotiated individually with each client to ensure a mutually beneficial agreement. For many clients, solar costs are lower than those of electricity from the national grid.

South Africa

Footprint

As with the nature of our business, our objective is to service all Provinces within the borders of South Africa, as well as provide services beyond our borders where required. **We are headquartered in Durban and have a footprint in these regions of South Africa.** However, we expand to new areas as directed by the business requirements.
